- Chemsex
- Cure
- Diagnostics
- Drug interactions
- Family dynamics
- HIV and exercise
- Integrated care
- Mental health
- Multi-vulnerable populations
- Neurocognitive impairment
- Oral health
- Patient related outcome measures
- Psychosocial well being
- Quality of life
- Reproductive health
- Sexual health
- Technology and management of HIV
- Transgender health
- Undetectable = Untransmittable
- Wellbeing and quality of life

# Ageing with HIV 18-50 years: Main findings

---

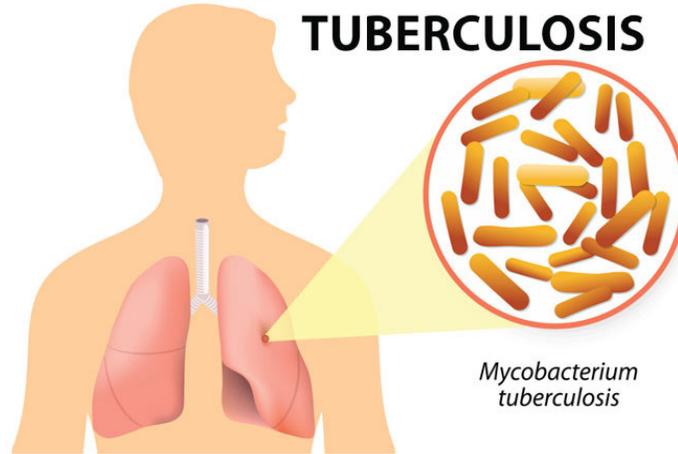

- Co-morbidities – need for preventative screening
- Mental health and suicide
- Vulnerable groups: IDUs, migrants, trans people, sex workers
  - Face stigma and discrimination
- Women living with HIV: pregnancy, motherhood, intimate partner violence
- Constant need for updated knowledge on HIV (e.g. U=U) for all stakeholders
- Fragmented health and social care systems
- Quality of Life - Patient Related Outcome Measures (PROMS) that include also lifestyles, family and social circumstances
- Standards of care, international guidelines need to be improved

# Ageing with HIV 18-50 years: Main findings

---

## **Clinical needs:**

- Integrated models of care - Co-morbidities, mental health.
- Clinical research - Women living with HIV, transgender, sex workers
- Confidential history taking e.g. Chemsex, vulnerable groups.

## **Community needs:**

- Reduce fragmented health and social care systems
- Rights and access to care: IDUs, migrants, trans people, sex workers.
- Quality of care – basic human needs and improved reporting systems.

# Ageing with HIV 18-50 years: Recommendations

---

**Co-morbidities: Prevention and Increased screening**

**Mental health: Integrated models of care**

**Vulnerable groups: Access to care and human rights issues**

**Women: Clinical research needs & peer mentors**

**Information & knowledge: Access to technology and literature**

**Health systems: Adopt U=U message and report outcomes**

**Quality of life: Encourage healthier lifestyles**

# Ageing with HIV 18-50 years: Recommendations

---

## How?

- **Challenge policy makers at the highest level**
- **Challenge and campaign to reduce stigma and discrimination**
- **Integrated models of care**
- **Vulnerable groups: Treatment, prevention and human rights issues**
- **Women: Clinical research needs & peer mentors**
- **Information & knowledge: Access to technology and literature**
- **Health systems: Adopt U=U message and report outcomes**
- **Quality of life: Encourage healthier lifestyles**

Access to care

Mental health

Train and educate

Develop Patient Reported Outcome Measures (PROMS)

AND: Increase research and CURE
